Above you see the 1<sup>st</sup> 100 digits of  $\pi$ . Your extra credit/make-up blog assignment is to write a story (about anything) using the numbers of  $\pi$  as a guide. This is what I mean...the first word of your story needs to be 3 letters long, the next needs to be 1 letter long, then 4 letters long, etc. Zeros are "wild," meaning any length of word can be used. The story needs to make sense, so chose your words wisely! Punctuation does not count as a "word."

To help me, please write the number above every word, so I can quickly check to see if you followed directions! This is a tough task, but I believe if you want the extra credit, you will be able to come up with a creative story using  $\pi$ . Good luck!! Due on exam day for credit.
